New remote control system for Shuttlewagon mobile railcar movers

All new for 2009, Shuttlewagon®'s powerful new FCC licensed Unity remote control system offers remote vehicle start up and shut down and a lighter easier to operate controller with back lit LED screen that displays critical vehicle information to the operator by way of it's "talkback" function. This permits remote ground control of rail operations to be conducted similar to in cab operations with fewer involved personnel. For more information about this advanced remote control system or any of our other products for railcar switching operations contact us at (816) 767-0300 or visit our website at www.shuttlewagon.com.
