NORDCO REBUILT MACHINE PROGRAM  
EXPANDED TO INCLUDE BALLAST REGULATORS

Nordco has expanded its rebuilt Maintenance-of-Way machine program to include Pyke/Nordco Model KL, M and M2 Ballast Regulator/Snow Fighters. Nordco rebuilds the machines from the frame-up, delivering a like-new piece of equipment with a new machine warranty. The rebuilds incorporate many of the technology upgrades included in Nordco's current M7 Ballast Regulator/Snow Fighter. The rebuilt machines feature:

- New cooler-running, variable volume hydraulic system with hydraulic progressive brakes
- Elimination of the pneumatic system
- Redesigned sealed and pressurized ergonomic cab
- Reinforced frame
- Tier III electronic engine
- Remote mounted oil cooler with fan
- EDC controlled hydrostatic drive system
- Cab controlled power locks for broom and front plow
- 24VDC electrical system

Nordco also rebuilds its Grabber and Super Claw Spike Pullers, Anchor Applicator and Auto-Lift machines, and offers a complete conversion of its Model C Spiker to the updated Model CX Hammer Spiker. In addition, the company offers a selection of rebuilt workheads and other machine components. Information on the company's rebuilt machine program and other products can be found at [www.nordco.com](http://www.nordco.com).
