BULLETIN NO. 226

DATE: July 31, 1995

MACHINE: **Hydra Hammers**

PRODUCTION

DATES: All Hydra-Hammers

SUBJECT: **Hammer Anvil**

We have received customer feedback that some anvil tips and their retaining pins (item numbers 1 and 2 in the figure) have been breaking.

A new Hammer Anvil, Nordco P/N 1056 0026 (item number 3 in the figure) has been designed and is available to order. This anvil has a wider I.D. allowing the anvil tip to move, and a slotted hole for the retaining pin allowing the pin to move up and down with the tip. This change should reduce the amount of stress at those points and limit the amount of breakage.

To order, contact your Nordco Representative or contact Nordco direct.
