

PRODUCT SUPPORT BULLETIN BULLETIN NO. 330

DATE: **July 12, 2001**

MACHINE: **All Ballast Regulators**

SERIAL
NUMBER(S): **All**

SUBJECT: **Non-rotating Plow Broom Element Clamp Bracket – P/N 860310**

The Plow Broom Element Clamp has been redesigned to prevent rotation of the elements during use. This new design also helps keep the Broom Elements in contact with the rail web to improve ballast removal. The original clamps held a pair of elements each by a single bolt through the clamp and plow.

The new design holds all of the elements with a single **Clamp, part number 860310** on the front and back of the plow as shown in the illustration. This new clamp will mount to the plow using the existing holes in the plow, so no modifications to the plow are required. Four **1/2" x 6-1/2" Bolts, p/n 0619**; four **Washers, p/n 2705** and four **Locknuts, p/n 2628** are also required to secure each pair of clamps. A total of 4 clamps are required per machine.

Contact the NORDCO Parts Department or your NORDCO Representative for price and delivery.
