

Aftermarket Parts Report

Current information on Nordco Maintenance-of-Way machine parts and kits

Welcome to the Nordco Aftermarket Parts Report

Issue 1 January, 2009

A portion of the Nordco parts warehouse at our Oak Creek, Wisconsin facility.

This newsletter is designed to help you identify, order and apply the right parts for your Nordco Maintenance-of-Way machines. Each issue includes product applications and other information of interest. We will include a copy with our parts shipments once a month. All issues will also be posted on our website at www.nordco.com.

Featured product: Workhead Travel Lock Kit

Part number: 98412425

Used On: CX Hammer: 410500 and above (including RB-UG), Model C Spiking Machine: 410010 - 410139 (including RB-UG), Model 99C Spiking Machine: 410200-410424, (including RB-UG)

What it does: Restrains workhead during travel, preventing damage to actuators.

Description: When machines are shipped from one location to another – particularly by truck or rail car – the unrestrained workheads can swing free and damage the Pattern Adjusting Actuators. This problem can be prevented with installation of the Workhead Travel Lock Kit. This kit can be easily installed in the field on any CX Hammer, Model C Spiking Machine or Model 99C Spiking Machine. (Follow all lock out – tag out procedures). One kit is required per machine. It includes instructions and all parts required for installation.

Featured in next issue: TRIPP Cab Lighting Kit

For more information on kits, visit our website at www.nordco.com, or contact Nordco Parts Sales at 1-800-647-1724, or at Parts_Sales@nordco.com.

Have the right parts on hand with Nordco Spare Parts Packages

Nordco has created a selection of Spare Parts Packages for many of its Maintenance-of-Way machines, including the CX Hammer, TRIPP Tie Inserter/Remover, SP2R Two Rail Spike Puller and others. **Basic** Spare Parts Packages provide the most critical high-wear components likely to be required when servicing a machine. As the name implies, **Expanded** packages offer a broader selection of spare parts. **Fleet** packages are the most complete, and include a majority of parts that are likely to be required for machine maintenance at some point. A complete list of Spare Parts Packages, along with printable product information is available in the Parts section of the Nordco website at www.nordco.com.

Maintenance now prevents problems later

Performing routine maintenance on your Maintenance-of-Way machinery now can help improve machine reliability while preventing a host of problems during the busy construction season, including machine downtime, project delays and costly repairs. Here is a checklist of maintenance steps for the Kent Hammer, one of the key components of the Nordco CX Hammer Spiker.

- ✓ Has the Accumulator 79140945 been replaced? This convenient assembly includes the cap, body and diaphragm; replacement is recommended yearly.
- ✓ Do you have the appropriate tool for assembly and disassembly of the Accumulator? These tasks are quick and easy with the Nordco Spanner Wrench 4011560.
- ✓ Are the Rod Pins 3308026 showing wear? Replacement is recommended yearly, as this helps prevent other more serious problems.
- ✓ Has the Hammer Lifting Eye 98410212 been added to your hammer? This kit makes it possible to lift the hammer in and out with a crane instead of manually.
- ✓ Do you have the right back-up parts on hand to help prevent breakdowns? Examples include the Seal Kit 68010009, Diaphragm 7296022 and Charge Kit 98410014.

Each issue of the Aftermarket Parts Report will include a checklist for new machine or assembly kits and parts. Contact **Nordco Parts Sales** for assistance with all of your parts needs.
