

## Steel Manifold Covers Assembly

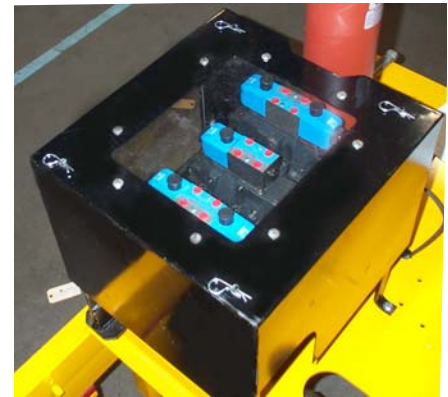

Nordco has introduced the following assembly for use on the CX Hammer Production Spiker.

### STEEL MANIFOLD COVERS ASSEMBLY

Nordco part number 96412822

This assembly includes five sturdy steel covers that shield the manifold valve stacks on the CX Hammer from rain, snow, ice and debris. This helps prevent damage to bolts, valves and O-rings, reducing costly downtime for the machine and the need for time-consuming maintenance. The assembly includes a right-hand and left-hand main manifold cover, left-hand and right-hand guide roller/feed manifold cover, and a propel manifold cover. The covers include a clear impact resistant panel so the valve stack remains visible at all times. The covers are easy to install and remove when the valve stacks require servicing.

- Use with any CX Hammer
- Install in the field or shop
- Includes hardware required for installation

*The Steel Manifold Covers Assembly protects vulnerable valve stacks on the CX Hammer from debris and the elements. Pictured are three of the five covers included in the assembly.*
