

The Nordco M7 Ballast Regulator/Snow Fighter includes a fully enclosed cab with joystick controls and excellent visibility. The four-speed electronic powershift transmission includes direct drive that enables the operator to upshift and downshift on the move. Ballast wings are designed for increased durability and include breakaway template doors with optional articulation. The M-7 is designed for mainline and yard snow removal applications. It is equipped with heavy-duty snow wings with 16.5-foot reach; a three-stage snow screw and blower; and an assortment of front snow plows and flanging attachments. The multi-position snowplow allows for snow placement to the right or left of the track or in a "V" configuration. A variety of high-speed plows allow for snow clearing at more than 30-MPH.

Tiltable Stone Deflector
