

Rail Flaw Detection

Equipment and Services

About the Company

Nordco is a major supplier to North American Class 1 railroads, regional and short-line railroads, public transit systems, railroad contractors, equipment leasing companies, and rail mills. Nordco also serves industries that rely heavily on rail transportation, including port authorities, agriculture, mining, chemicals, and energy.

Major Product/Service Lines

Rail Flaw Inspection Services

Our rail flaw inspection services include:

- Our vehicle/our two-person crew (chief operator & driver)
- Our vehicle/our chief operator (you supply driver)
- Our two-person crew (chief operator & driver) to operate your Nordco vehicle

Vehicle Inspection Systems

Our vehicle inspection products include:

- NRS-260

Portable Inspection Systems

Our portable inspection products include:

- MultiPass
- One Pass

Key Products and Services

Rail Flaw Detection Equipment

- Vehicle Inspection Systems
- Flex Inspection Systems
- Portable Inspection Systems
- Rail-Bound Inspection Systems
- Wheel Inspection Systems

Rail Flaw Inspection Services

Training

- NDT Levels 1-3
- Nordco System Training

Spare Parts

Flex Inspection Systems

Our Flex inspection products include:

- Flex (vehicle-mounted)
- Flex (skid-mounted)

Rail-Bound Inspection Systems

Our rail-bound inspection products include:

- Rail-Bound Inspection System

Wheel Inspection Systems

Our wheel inspection products include:

- Stationary Wheel Inspection System
- Wayside Wheel Inspection System

Nordco Rail Services and Inspection Technologies is a leader in non-destructive testing solutions for railroads and other industries. Our rail flaw detection systems, include the compact and portable Flex system, rail flaw inspection vehicles, portable inspection systems, as well as rail-bound and wheel inspection systems.

Our patented ultrasonic wheel probe includes nine complementary high-frequency transducers - the most integrated transducers in one unit in the industry - that search for flaws in traverse, longitudinal, and oblique directions.

In addition, we provide a broad range of rail inspection-related services, including rail flaw inspection, U/T certification of replacement rail, crossover testing, data management, and NDT training/certification.
