

# PRODUCT SUPPORT

## BULLETIN NO. 219

**DATE:** April 18, 1995

**MACHINE:** All Hydra Spiker Super B's and Super B-2's; and All Hydra Hammers - with Nippers

### PRODUCTION

**DATES:** Super B/Super B-2: 11/82-Current  
Hydra-Hammers: 9/90 - Current

**SUBJECT:** Nipper Limit Switch Kit

A kit has been developed to prevent the machine from propelling while the tie nippers are in the down position.

This kit consists of a limit switch to detect when the the nippers are down, a mounting bracket, limit switch actuator and hardware. This kit can be easily installed on any Super B or Hydra-Hammer with nippers in 2-3 hours. Some welding is required. An assembly illustration is given on the other side of this page.

When the nippers are down within 3 inches of a tie, the brakes will not release, preventing the machine from moving. This will help prevent undue strain to the nippers caused by moving the machine while the nippers are hooked to a tie.

The kit, part number 9844 0003, sells for \$375.00.
