All Grabbers, S/N 101 and Above
Includes Limit Switch Machines
(Production: 2/82 through Present)

SUBJECT: LIFTING BAIL REINFORCEMENT

We have been informed that some lifting bails have cracked where they are welded to the main frame. To correct this problem a LIFTING BAIL REINFORCEMENT kit, Nordco P/N 9835 0119 has been developed to add reinforcing plates to the frame. This kit is now available to anyone experiencing this problem, upon request.

The kit contains two 3/8" A36 steel plates (Nordco P/N 5611 9021) that are welded to the main frame and instructions for surface preparation and welding. See back side of bulletin for drawing.

To order the kit contact your Nordco Representative or contact Nordco direct. As is the case for all kits ordered from Nordco, we must have the S/N of the machine that the kit is being applied to.
