SUBJECT: **CLAW LEVER BUSHING**

Responding to concerns regarding lever bushing wear on the Claw Levers, we have changed the material used to hardened steel. The new bushing, Nordco Part Number 22052252, will replace the old bushing (P/N 22052251) on all future production machines.

When ordering the new bushing for repair parts, please note that this bushing will fit the current claw lever bore, but requires that a 1/8-27 NPT hole be added to the lever to accommodate a grease fitting (Nordco P/N 3801110) for lubrication of the steel bushing. See figure below for lever hole drilling location and dimensions.

Please contact your Nordco Representative or Nordco Parts Sales for prices and availability.
