

PRODUCT SUPPORT BULLETIN BULLETIN NO. 273

DATE: May 8, 1998

MACHINE: Auto-Lift

**SERIAL
NUMBER(S):** Up to 598

SUBJECT: Control Cable Support Kit 98790011

This kit has been developed to improve the life of the Remote Plate Pusher Control Cable. The original cable is a retractable “curly cord”. If this cable is pulled out too far, it will no longer retract completely. This is caused by the operators inserting plates too far in front of the machine. The cord can then drag on the ground and be run over by the machine or otherwise damaged.

This kit solves the stretching problem by replacing the “curly cord” with a flexible, non-retracting cord carried on a spring loaded support. This support will hold the cord up out of the way but still allow the operator freedom of movement. Strain reliefs are integral with the cord to prevent damage to the electrical connections.

This kit can be installed in about an hour. Tubes to hold the spring supports and two u-bolts are welded to the frame. The cables are connected between the remote plate pusher and the connection on the machine using the same connectors as the old cable and clamped to the spring support. The strain reliefs are connected and the installation is complete.

Please contact your NORDCO representative or the NORDCO Parts Department for price and availability.
