

PRODUCT SUPPORT BULLETIN BULLETIN NO. 314

DATE: **August 30, 2000**

MACHINE: **Model C Spike Driver**

SERIAL
NUMBER(S): **All**

SUBJECT: **Improved Cable and Repair Parts for Controller – p/n 26600610**

These controllers, p/n 26600610, used on all Model C Spike Drivers, now have a heavier, more flexible electrical cable. This will prevent wire breakage caused by the constant flexing of the wires by controller movement on the spotting valves.

In addition, service repair parts are now available for these controllers. These parts allow the replacement of the individual switches inside the controller instead of replacing the entire controller.

The service parts include the **Single Pushbutton Switch, Double Pushbutton Switch** (rocker switch) and **Single and Double Keycaps**. The keycaps are the switch parts that are visible on the outside of the controller. Each controller has 3 single pushbutton switches and keycaps, and 1 double pushbutton switch and keycaps.

The repair part numbers are listed below. Each kit will repair one switch or keycap:

- 98410064** Single Pushbutton Kit
- 98410065** Double Pushbutton Kit
- 98410066** Single Keycap Kit
- 98410067** Double Keycap Kit

Please contact your NORDCO Representative or the NORDCO Parts Department for pricing and availability.
