New Spare Parts Packages Introduced

Issue 2 February, 2009

Nordco has added to its selection of Spare Parts Packages with the introduction of Basic, Expanded and Fleet packages for the M7 Ballast Regulator/Snow Fighter and the Nordco Spring Clip Applicator (NSCA). The Spare Parts Packages include critical and frequently ordered parts. The M7 and NSCA packages – along with all the other available packages – can be found in the Parts section of the Nordco website at www.nordco.com. For more information contact the Nordco Parts Sales Team at 1-800-647-1724.

Nordco has developed Spare Parts Packages for the M7 Ballast Regulator/Snow Fighter and the Spring Clip Applicator (pictured above).

Featured product: TRIPP Interior Cab Lighting Kit

Part number: 98760056

Used On: TRIPP Tie Inserter/Remover
Machine serial numbers 760134 to 760324
(except for 760320)

What it does: Provides additional lighting in TRIPP cab.

Description: The Nordco TRIPP Interior Cab Lighting Kit provides an adjustable light source for TRIPP operators. The kit is particularly useful in northern areas where darkness comes early from late fall through early spring. It also brightens the cab when the machine is working in other low-light conditions, such as heavily wooded areas and tunnels. The easy-to-install kit consists of two 5-Watt halogen lighting units on swivel mounts that make it possible for operators to direct the light where it's needed. The lighting unit's heavy-duty construction is designed to withstand the vibration experienced during work and travel.

The right repair and upgrade kit is just a “click” away

Nordco has developed so many repair and upgrade kits that it isn't always apparent which kit is right for your particular machine and application – until now, that is. Nordco has introduced a Kit Search feature on our website that makes it easy for you to zero in on the kits that meet your specific needs. Our repair and upgrade kits include all the required parts to complete maintenance tasks and improvements to your machine. You may need to change out a high-wear component or incorporate the latest machine enhancement. In many cases kits are pre-assembled, meaning you install a single element instead of multiple individual parts. To use this feature go to the Parts section on www.nordco.com and select “Search for a Repair and Upgrade Kit.” You can then search for a kit by the following parameters:

Keyword: For example if you enter “cylinder,” or “manifold” a list of kits that include those words in the kit name or description will be displayed.

Machine type: Select a machine from the dropdown menu to see all the kits that are designed for that type of equipment.

Kit part number: Enter the part number to get a complete description of the kit.

Component part number: Enter a part number to see a list of kits that incorporate the item as a key component.

If you would like to order any of the kits, simply click on “add to order” and it will automatically be added to the online order request form.

The screenshot shows the Nordco website's Kit Search interface. At the top, there is a navigation menu with links: About Nordco, Employment, New Machines, Rebuilt Machines, Parts, Contact Us, Technical Support, and Home. A search bar is located in the top right corner. The main content area is titled "Nordco Repair and Upgrade Kits" and includes a link to a printable list of popular kits. Below this, there are instructions for using the search feature, including fields for Keyword, Machine Type (a dropdown menu), Kit Part Number, and Component Part Number. A "Search" button and a "view all" link are provided. A yellow banner indicates "You are viewing all Repair Upgrade Kits." At the bottom, a table header is visible with columns: Machine, Serial # Range, Kit part #, Description, What it does, Consider kit if you use, Found in PSB or, and Used in.
